Jump Start

Aviary Rearing for Layers

The Jump Start is our most proven and dependable rearing system.

Jump Start helps pullets acclimatize to any of the Vencomatic aviary systems, minimizing bird stress and improving production. Pullets are placed on a slatted surface where they have direct access to feed and water. As birds grow, the difference between feeding and drinking levels gradually increases as the birds learn to jump to different levels and perches.

Key Features

- Our most proven and dependable rearing system
- Suitable for all aviary production systems
- System teaches birds how to navigate an aviary system
- Can fit most barns

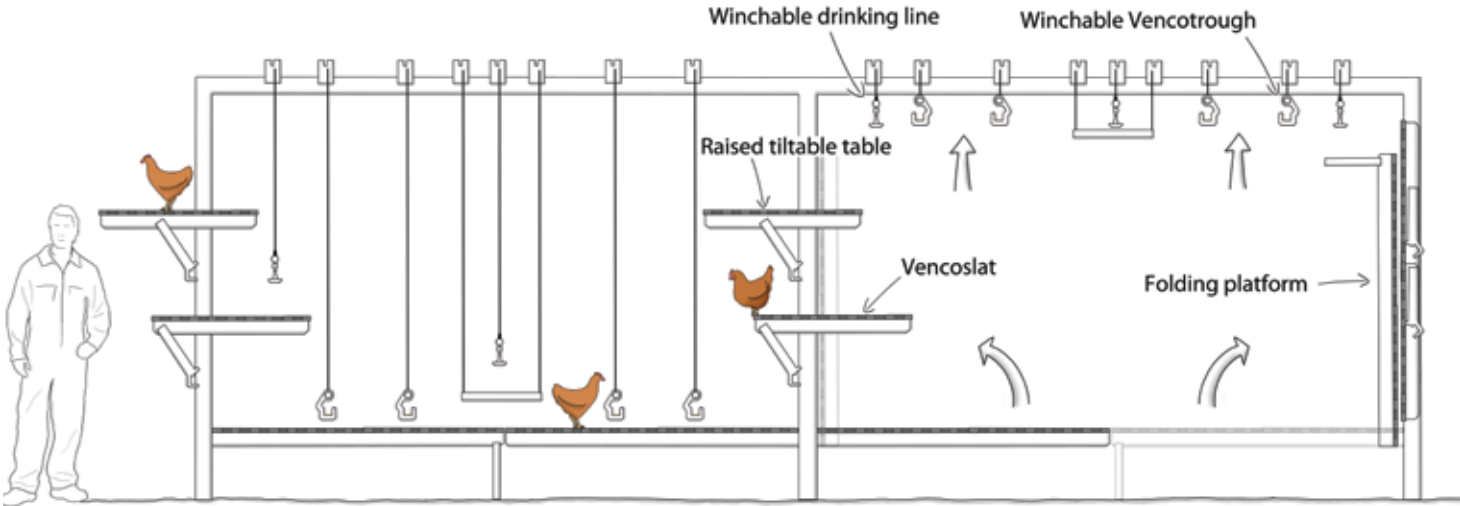

Easy Maintenance

- Easy cleaning after each flock
- Low maintenance plastic floor slats
