Veranda Breeder

Houses More Birds Than Any Other Breeder Solution

The Veranda is a group housing system that will house more birds than any of our other breeder solutions.

By adding tiers, the Veranda Breeder can increase flock size by two to three times, compared with a floor system of the same square footage. Automatic nests with tipping floors are integrated in the system resulting in very clean hatching eggs. The availability of nests, feed, water, light and fresh air at bird level creates an ideal production environment for hens. The Veranda Breeder, coupled with good bird management practices, results in higher egg production and more hatching eggs per hen.

Key Features

- Flock size can be increased two to three times
- Automatic nests with tipping floor
- Nests, feed, water, light and fresh air at bird level
- Eliminates system eggs

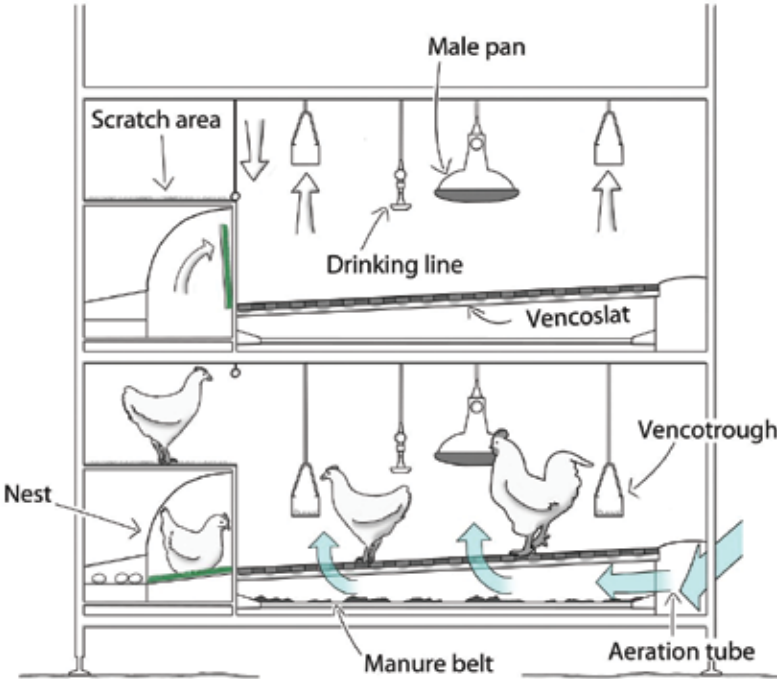

Easy Maintenance

- Durable and welfare-friendly materials
- Self-cleaning nest pad due to tippable floor
- Easy access to all vital parts for fast and easy cleaning

Quality Production

- Very clean hatching eggs
- More hatching eggs per hen
- Higher egg production

Product Details

Standard Specifications	Imperial	Metric
Nest Surface	12' ¾" ²	1184.5 mm ²
Nest Dimensions		
• Length	7' ½"	2300 mm
• Width	1' 8"	515 mm
• Height	1' 5"	438 mm
Width egg belt	10"	257mm
