VEIT Electronics: Dedicated to Innovation

The **in-house development centre** at VEIT Electronics is the driving force behind the unique industry-leading innovations used in its vehicles all over the world. The **latest major developments** to come out of this centre include:

- 1) the first-ever truly double cooling system
- 2) an enhanced, portable control module
- 3) automated power management

The result is **safety, performance, and power** that you simply cannot find anywhere else.

innovation # **one** >

+ Double Cooling

Taking secure chick comfort to the next level

UNPRECEDENTED SAFETY

- the cooling system is comprised of **two stand-alone cooling circuits**, including motors and heat exchangers
- if needed, each circuit is powerful enough to fully cool the entire cargo space on its own, without any time limits

NEW, IMPROVED HIGH-PERFORMANCE DESIGN

- **15% stronger ventilation** thanks to a redesigned evaporator and an optimised circulation channel

HIGHEST COOLING CAPACITY ON THE MARKET

- each circuit provides a full **70 kW of cooling power** – the highest in the industry
- in extreme conditions, both circuits can work in tandem to supply **90 kW of cooling power**

REDUCED WEAR AND TEAR

- the control system alternates between both circuits to balance the operating hours of each and decrease maintenance time and repairs

innovation #two >

+ VEIT Pilot

Comfort and control, for you and your drivers

EVEN SIMPLER, MORE INTUITIVE CONTROLS

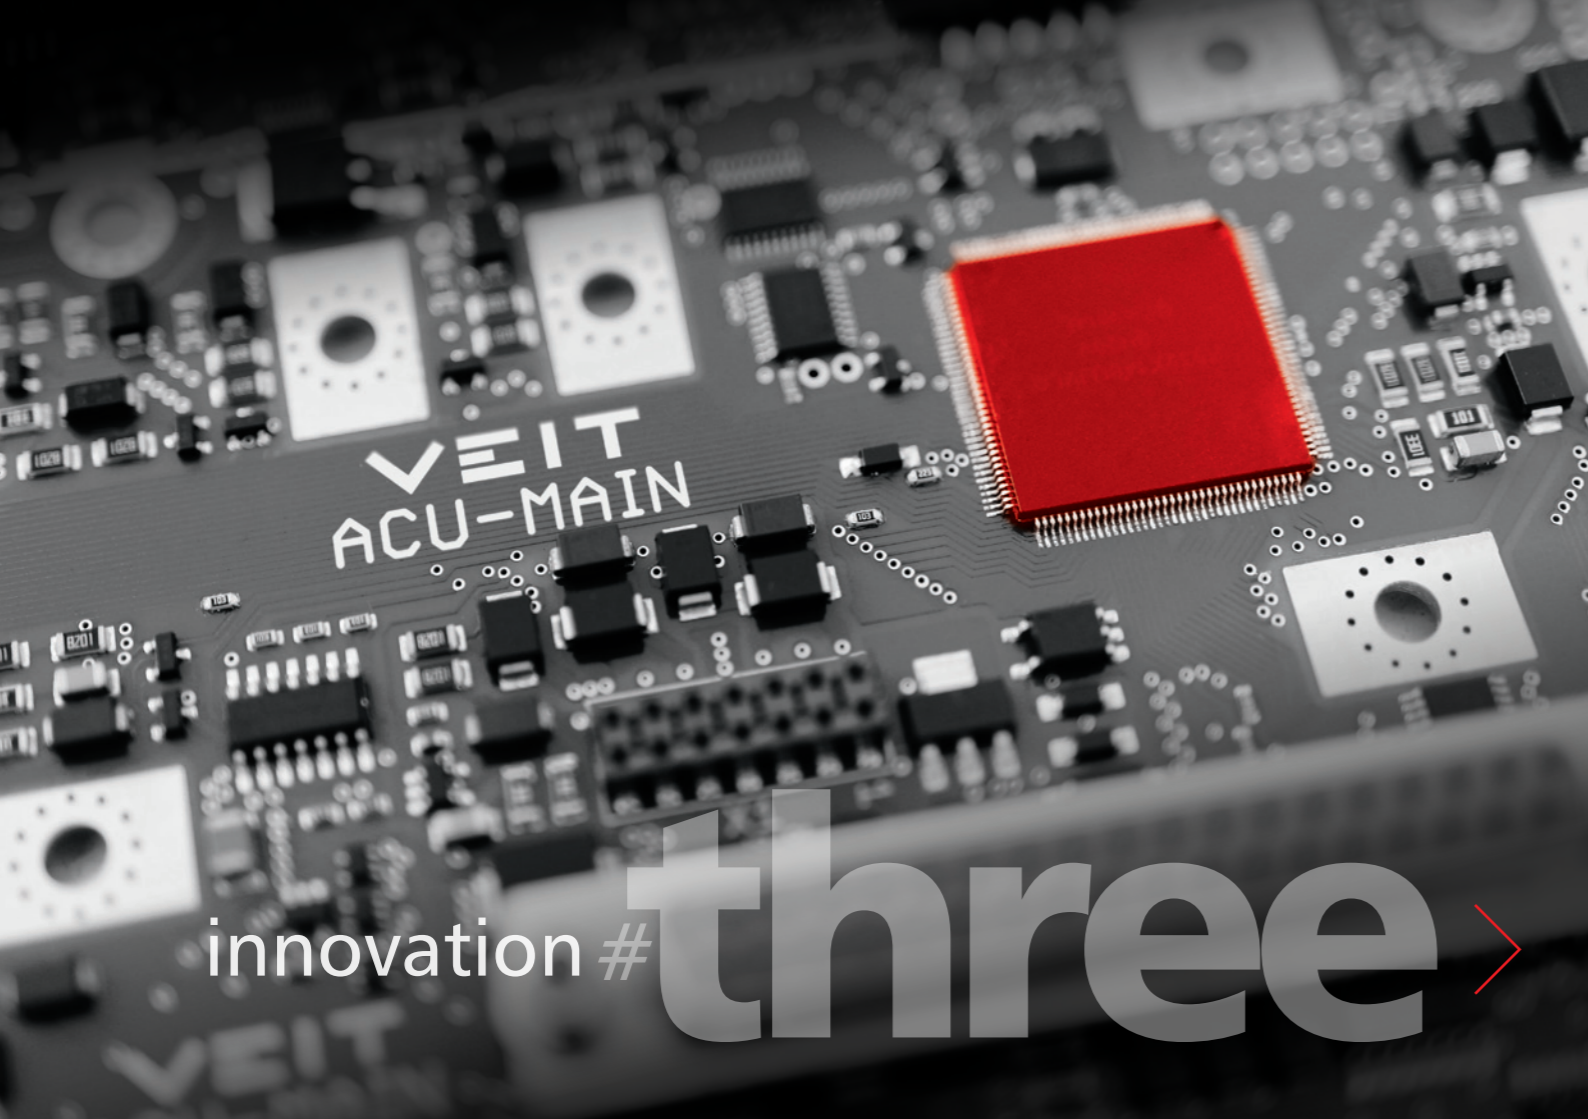

- the beautifully designed interface makes it easy for the driver to operate and for supervisors to monitor the shipment from any Android device

REMOVABLE TABLET

- an extremely durable portable control interface gives the driver uninterrupted access to the system, even outside the cab

- shock-proof, heavy-duty frame
- easy-to-use interface
- wireless real-time configuration and monitoring

+ Automated Power Management

Superior efficiency in every situation

AUTOMATED POWER MANAGEMENT

- simplified controls **greatly reduce** the level of driver experience required for successful transport
- **easy as 1-2-3:** turn it on, set the temperature, and off you go! The automatic control system will handle the rest

AUTOMATED POWER DISTRIBUTION

- cutting-edge algorithms automatically draw power from **the most efficient combination** of 5 power sources (tractor engine, dual diesel motors, electric motor, and batteries)
- proprietary **EcoTransport technology** removes the need for high-voltage generators, providing safer, lower-cost power

OUR COMMITMENT

No matter where you travel, our powerful, user-friendly technology will ensure your chicks get there safely, securely and in the highest quality possible.
